

ShopEase — Payment & Transaction Policy

Company: ShopEase	Effective Date: 01 September 2026
Document Type: Payment Policy	Last Updated: 01 September 2026
Version: 1.0	Status: Active

1. Accepted Payment Methods & Channels

ShopEase provides a secure, frictionless checkout experience supporting all widely used digital and cash payment instruments in India. All transactions are billed exclusively in Indian Rupees (INR, ₹).

Payment Method	Supported Providers / Networks	Transaction Limits / Conditions
Credit Cards	Visa, MasterCard, RuPay, American Express, Diners Club	Requires 3D Secure 2FA / OTP verification
Debit Cards	All major public, private, and cooperative Indian banks	Direct debit via bank gateway; OTP verification mandatory
UPI (Unified Payments)	Google Pay, PhonePe, Paytm, BHIM, Cred, Bank UPI apps	Instant bank-to-bank settlement; up to ₹1,00,000 per order
Net Banking	Over 50 authorized Indian commercial & state banks	Redirects to secure banking portal; requires bank credentials
Digital Wallets	Paytm Wallet, Amazon Pay, Mobikwik, PhonePe Wallet	Pre-loaded wallet balance; instant one-click debit
Cash on Delivery (COD)	Eligible pin codes only; physical currency / doorstep UPI	Maximum order cap: ₹10,000; requires phone verification

2. Payment Confirmation & Processing Lifecycle

Upon completing checkout, our payment gateway conducts instant authorization with the acquiring bank. If successful, the order status transitions to 'Order Placed' within 5 to 15 seconds, and an automated transaction invoice containing the unique Transaction ID and Bank Reference Number is generated.

CASH ON DELIVERY (COD) VERIFICATION RULE

Rule: To minimize delivery refusal fraud, COD orders exceeding ₹2,000 or placed from new customer accounts may trigger an automated interactive voice response (IVR) call or an SMS verification link before order dispatch.

3. Managing Failed, Pending & Duplicate Transactions

Failed Payment with Money Deducted: If funds are debited from your bank account or card but ShopEase displays a 'Payment Failed' or 'Order Not Placed' screen, the funds are safely held in the inter-bank clearing pool. Under Reserve Bank of India (RBI) reconciliation mandates, your issuing bank will automatically reverse the debited amount to your source account within 24 to 48 business hours.

Pending / Processing Payment: Occasional banking network latency may delay confirmation. ShopEase holds the order in 'Payment Pending' status for exactly 15 minutes while continuously querying the payment gateway. If confirmation is received within this window, the order is confirmed; otherwise, the order is automatically cancelled, and any arriving funds are systematically refunded.

Duplicate Payment for Single Order: If network lag causes a customer to submit payment twice for the same cart, our automated treasury reconciliation system detects the duplicate transaction. The second payment is automatically flagged and initiated for a 100% reversal within 24 hours back to the original funding instrument.

4. Payment Security & Encryption Standards

ShopEase adheres to the highest global payment industry data protection benchmarks:

- **PCI-DSS Level 1 Certification:** All payment transaction infrastructure complies with Payment Card Industry Data Security Standards.
- **256-Bit SSL/TLS Encryption:** All communication between customer browsers, apps, and payment servers is strictly encrypted.
- **RBI Card Tokenization Compliance:** In accordance with RBI guidelines, ShopEase does not store actual 16-digit card numbers or CVVs. Cards are tokenized into encrypted tokens managed by card networks.

CRITICAL PAYMENT SAFETY REMINDER

ShopEase support staff will NEVER request: Password, OTP, CVV, Card PIN, Authentication codes. Never disclose payment authentication credentials to anyone claiming to represent ShopEase.
